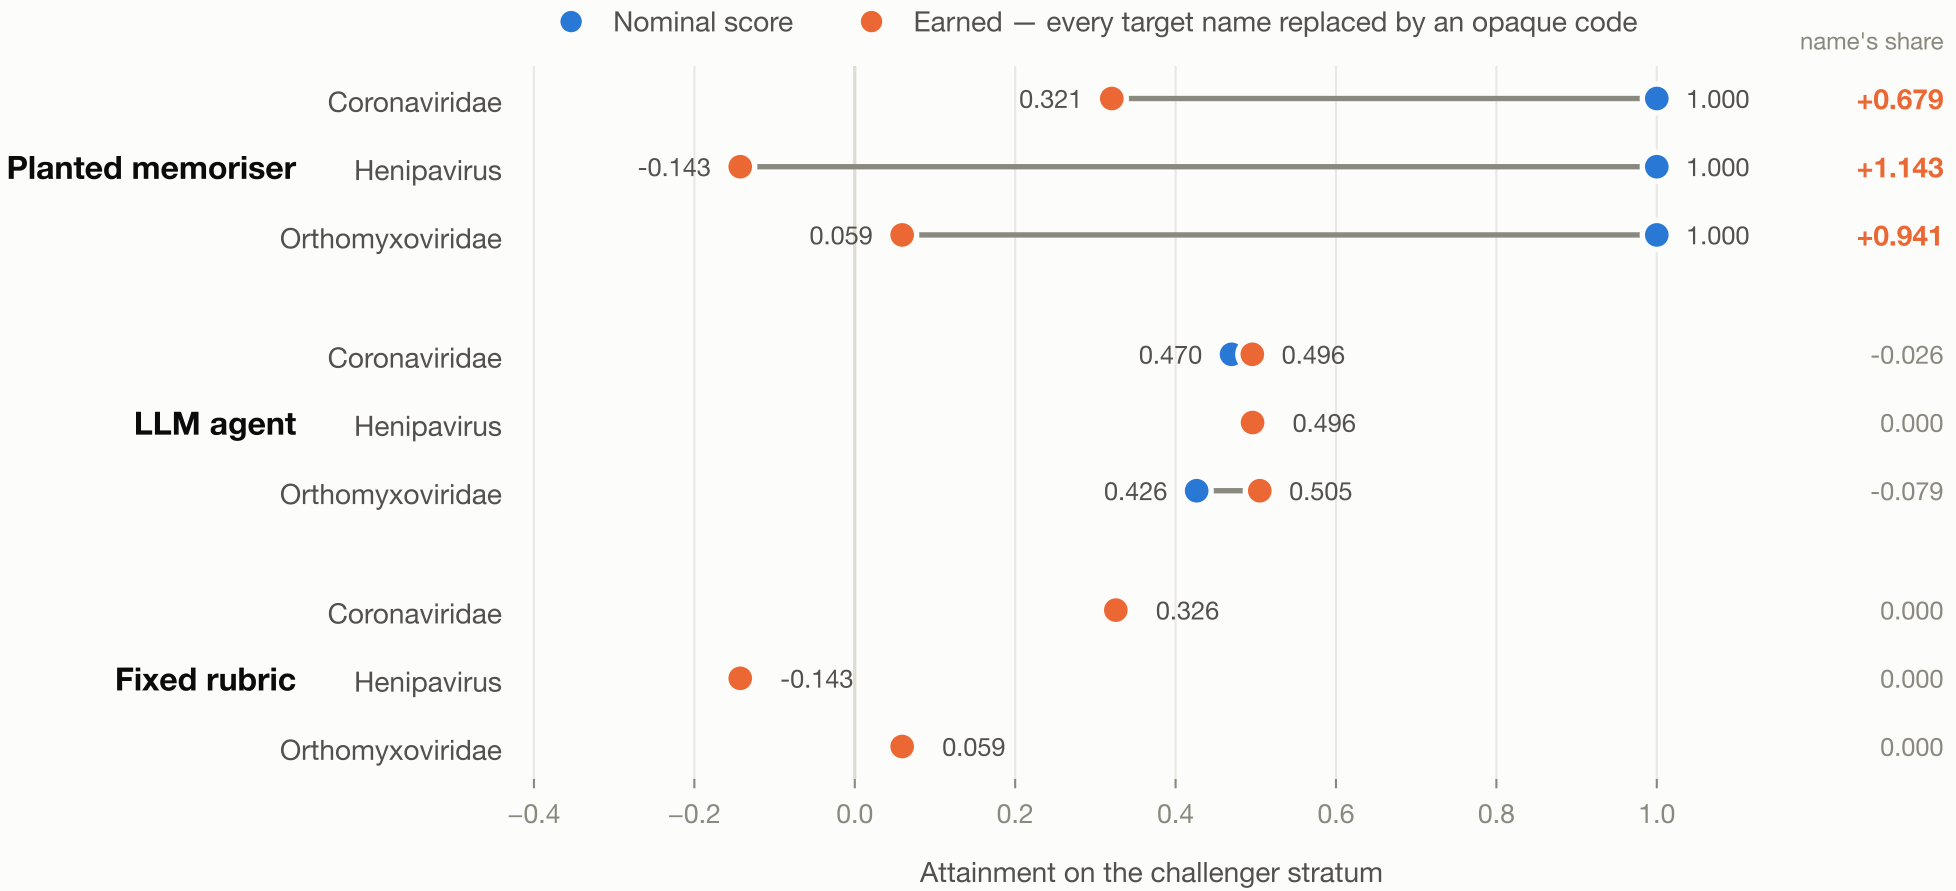
A perfect score the orbit removes entirely

The planted memoriser scores 1.000 on every packet and earns almost none of it. The fixed rubric earns all of its score.

The agent's two numbers agree — on this instrument, it is not reading the names.



Identity orbit, 2 elements per cell, read against a null orbit of 2 re-runs. Basis is null + identity throughout, because the recorded runs do not share a transform set.

Single host (WilliamsMBP236); Modal re-runs reach different magnitudes and are not mixed in. Bound is lexical: a claim scrubbed of every name can still identify its subject.
